Document gaps, risk and account activity

Hi all,

I may be joining dots that do not belong together, so please challenge the premise.

A blanket refresh would create unnecessary customer friction, so Compliance wants a defensible prioritisation. There is no confirmed problem yet; this is a request to test an assumption before it becomes policy.

Could the answer be that many document gaps belong to inactive or closed accounts? Or are we actually seeing that higher-risk active accounts should lead? I also do not want us to miss the possibility that company ownership and cross-border activity create distinct needs.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use December 2020 as the new evidence point rather than recycling the earlier conclusion. The practical decision is the refresh sequence, exclusion rules and customer-contact approach. Please send a Power BI page with drill-through to a reproducible case list; I need the exceptions and counter-examples, not only an average.

Work from monthly customer and KYC snapshots; monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context. Completeness fields do not prove document validity or current legal sufficiency.

Regards
