Follow-up: the rejection code may be doing too much work

Team,

Before this becomes another standing report, can we answer the real question?

Credit Risk needs to know whether recorded decline reasons are consistent with affordability, documentation and workflow evidence. The possible stories are that decline codes align with application facts, that generic reasons are masking multiple causes, or that channel differences indicate process inconsistency.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use August 2023 as the new evidence point rather than recycling the earlier conclusion. There is no confirmed problem yet; this is a request to test an assumption before it becomes policy.

Please prepare a Power BI page with drill-through to a reproducible case list. The output must help us decide which policy rules, reason codes or quality checks need revision.

Data available: the latest closed loan files available by the request date, including affordability, pricing and origination risk fields; monthly customer and KYC snapshots; monthly account snapshots, status events, limits, product enrolments and signatories.

Please state the limitation plainly: The separate rejected-account file and loan decisions represent different processes; do not merge them without a defined key and business rule.

Thanks
