Fees and interest are not landing where Finance expects

Morning,

I need help with something that sounds simple but probably is not.

A small number of fee and interest items appear difficult to trace from the transaction record to the customer-facing statement. The discussion is currently being driven by anecdotes, and the teams involved are describing the same customers differently.

The questions I would ask in the room are:
1. What would we expect to see if the issue is statement timing?
2. What evidence would instead support that reversals are not inheriting the original reference cleanly?
3. How do we rule out that the product configuration and transaction description disagree?

Please work towards whether Finance needs a mapping correction, a posting control or a customer remediation list. A useful output would be a control view with the exceptions, owner and reason each item was included.

Use transaction-level timestamps, channels, amounts, statuses and error context; monthly account snapshots, status events, limits, product enrolments and signatories; the latest closed loan files available by the request date, including affordability, pricing and origination risk fields; customer contacts, complaints and suggestions. One caution: Do not calculate general-ledger balances; no general ledger is present.

Regards
