Quick question: please find decisions that do not match the recorded evidence

Morning,

I need help with something that sounds simple but probably is not.

Audit is testing whether approvals, declines, restrictions and collections outcomes are consistent with recorded policy inputs. Please start with the decision we need to make, then show whether the available evidence is strong enough to support it.

The questions I would ask in the room are:
1. What would we expect to see if missing data looks like an override?
2. What evidence would instead support that overrides are rare and explainable?
3. How do we rule out that a channel or period has a materially different decision pattern?

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use November 2020 as the new evidence point rather than recycling the earlier conclusion. Please work towards the sample for process-owner walkthroughs and policy evidence. A useful output would be a model-ready table, data dictionary and an honest baseline.

Use the latest closed loan files available by the request date, including affordability, pricing and origination risk fields; monthly account snapshots, status events, limits, product enrolments and signatories; collections cases, promises to pay and recovery payments; monthly customer and KYC snapshots. One caution: The files do not contain every approval authority or policy version; flag unexplained differences rather than declaring misconduct.

Regards
