Promise-to-pay cash is not matching cleanly

Hi team,

Collections and Finance are using different notions of a successful recovery, especially when payments arrive after the promised date or through another channel.

We looked at a version of this before. For the February 2021 review, please show what changed and whether the earlier conclusion still holds. Several teams are reporting more failed or retried activity than they expected, but they do not agree on the cause. The first extracts did not reconcile, which means source precedence and exclusions must be part of the answer.

Can you test these explanations rather than choosing one at the start?
- partial cures are being reported as full cures
- a payment reaches the account but not the collections case
- late payments are being treated as broken promises

The decision is the definition of cure and the exception queue that Finance and Collections will both use. Please give us a model-ready table, data dictionary and an honest baseline.

You should be able to build the evidence from collections cases, promises to pay and recovery payments; transaction-level timestamps, channels, amounts, statuses and error context; the latest closed loan files available by the request date, including affordability, pricing and origination risk fields. The data can reconcile customer and case activity, but not the accounting ledger entry.

Thanks
