Follow-up: the bank should not confuse low income with low value

Team,

Before this becomes another standing report, can we answer the real question?

Compliance needs an outcome view for customers who may be more exposed to failed payments, repeated fees or difficult service journeys. The possible stories are that channel access affects resolution, that standard contact strategies create repeat complaints, or that income and collections stress identify higher exposure.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use December 2022 as the new evidence point rather than recycling the earlier conclusion. Several teams are reporting more failed or retried activity than they expected, but they do not agree on the cause.

Please prepare a Power BI page with drill-through to a reproducible case list. The output must help us decide which customer-treatment controls and monitoring indicators should be introduced.

Data available: monthly customer and KYC snapshots; transaction-level timestamps, channels, amounts, statuses and error context; collections cases, promises to pay and recovery payments; customer contacts, complaints and suggestions.

Please state the limitation plainly: Use vulnerability indicators carefully and never use them to reduce service or exclude customers.

Thanks
