Follow-up: fees and interest are not landing where Finance expects

Hi all,

I may be joining dots that do not belong together, so please challenge the premise.

A small number of fee and interest items appear difficult to trace from the transaction record to the customer-facing statement. Failure anecdotes are beginning to drive decisions, although retries and late posting may be making the problem look larger than the affected-customer population.

Could the answer be that the product configuration and transaction description disagree? Or are we actually seeing that reversals are not inheriting the original reference cleanly? I also do not want us to miss the possibility that the issue is statement timing.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use October 2022 as the new evidence point rather than recycling the earlier conclusion. The practical decision is whether Finance needs a mapping correction, a posting control or a customer remediation list. Please send a one-page finding note plus the underlying CSV for our own review; I need the exceptions and counter-examples, not only an average.

Work from transaction-level timestamps, channels, amounts, statuses and error context; monthly account snapshots, status events, limits, product enrolments and signatories; the latest closed loan files available by the request date, including affordability, pricing and origination risk fields; customer contacts, complaints and suggestions. Do not calculate general-ledger balances; no general ledger is present.

Regards
