Follow-up: KYC refresh should be risk-based, not a blanket campaign

Team,

Before this becomes another standing report, can we answer the real question?

A blanket refresh would create unnecessary customer friction, so Compliance wants a defensible prioritisation. The possible stories are that higher-risk active accounts should lead, that many document gaps belong to inactive or closed accounts, or that company ownership and cross-border activity create distinct needs.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use April 2024 as the new evidence point rather than recycling the earlier conclusion. The operating teams agree that more journeys are failing; they disagree on whether the customer, the bank or a downstream party owns the failure.

Please prepare a Power BI page with drill-through to a reproducible case list. The output must help us decide the refresh sequence, exclusion rules and customer-contact approach.

Data available: monthly customer and KYC snapshots; monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context.

Please state the limitation plainly: Completeness fields do not prove document validity or current legal sufficiency.

Thanks
