# Fees and interest are not landing where Finance expects

Hi all,

I may be joining dots that do not belong together, so please challenge the premise.

A small number of fee and interest items appear difficult to trace from the transaction record to the customer-facing statement. There is no confirmed problem yet; this is a request to test an assumption before it becomes policy.

Could the answer be that the product configuration and transaction description disagree? Or are we actually seeing that the issue is statement timing? I also do not want us to miss the possibility that reversals are not inheriting the original reference cleanly.

The practical decision is whether Finance needs a mapping correction, a posting control or a customer remediation list. Please send a short decision pack with no more than five slides and an attached evidence table; I need the exceptions and counter-examples, not only an average.

Work from transaction-level timestamps, channels, amounts, statuses and error context; monthly account snapshots, status events, limits, product enrolments and signatories; the latest closed loan files available by the request date, including affordability, pricing and origination risk fields; customer contacts, complaints and suggestions. Do not calculate general-ledger balances; no general ledger is present.

Regards
