Follow-up: A technically valid fee can still create a poor outcome

Team,

Before this becomes another standing report, can we answer the real question?

Compliance wants to examine charges that follow failed, reversed or delayed transactions and whether complaints were resolved consistently. The possible stories are that fees follow customer-caused failure, that similar cases receive different remedies, or that bank-side delay creates avoidable charges.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use October 2022 as the new evidence point rather than recycling the earlier conclusion. The operating teams agree that more journeys are failing; they disagree on whether the customer, the bank or a downstream party owns the failure.

Please prepare a model-ready table, data dictionary and an honest baseline. The output must help us decide whether a control, remediation population or policy clarification is required.

Data available: transaction-level timestamps, channels, amounts, statuses and error context; monthly account snapshots, status events, limits, product enrolments and signatories; customer contacts, complaints and suggestions; debit-order mandates, collection dates, suspensions and cancellations.

Please state the limitation plainly: The analysis can identify patterns and comparable cases; Compliance must interpret policy and legal obligations.

Thanks
