Application declines by channel and evidence

Hi,

This came up in a working session and nobody had the same definition.

Credit Risk needs to know whether recorded decline reasons are consistent with affordability, documentation and workflow evidence.

I do not want a dashboard that simply counts the outcome. Start with the competing explanations: channel differences indicate process inconsistency; decline codes align with application facts; or generic reasons are masking multiple causes.

Several teams are reporting more failed or retried activity than they expected, but they do not agree on the cause. This has returned because the previous answer was useful but not strong enough to become a standing rule. Use August 2021 as the new evidence point rather than recycling the earlier conclusion.

What we need to decide is which policy rules, reason codes or quality checks need revision. Please bring a working Excel file with the exception population and clear columns, including a few cases we can trace from source to conclusion.

The available evidence is the latest closed loan files available by the request date, including affordability, pricing and origination risk fields; monthly customer and KYC snapshots; monthly account snapshots, status events, limits, product enrolments and signatories. The separate rejected-account file and loan decisions represent different processes; do not merge them without a defined key and business rule.

Thank you
