The same arrears amount may need a different response - 2025 control review

Hi team,

Collections needs to distinguish temporary operational failures, short-term cash-flow stress and sustained affordability problems.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use January 2025 as the new evidence point rather than recycling the earlier conclusion. There is no confirmed problem yet; this is a request to test an assumption before it becomes policy.

Can you test these explanations rather than choosing one at the start?
- some customers recover after payday
- repeat failures and complaints indicate deeper stress
- bank-side processing issues are entering collections

The decision is which treatment path, contact tone and escalation should apply. Please give us a model-ready table, data dictionary and an honest baseline.

You should be able to build the evidence from collections cases, promises to pay and recovery payments; transaction-level timestamps, channels, amounts, statuses and error context; debit-order mandates, collection dates, suspensions and cancellations; customer contacts, complaints and suggestions; the latest closed loan files available by the request date, including affordability, pricing and origination risk fields. The data contains behavioural indicators, not a complete vulnerability or hardship assessment.

Thanks
