Follow-up: can the KYC population be reproduced without manual repair?

Hi team,

Regulatory Reporting needs a reproducible population of active, restricted and closed accounts with the relevant customer due-diligence fields.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use February 2021 as the new evidence point rather than recycling the earlier conclusion. The operating teams agree that more journeys are failing; they disagree on whether the customer, the bank or a downstream party owns the failure. The first extracts did not reconcile, which means source precedence and exclusions must be part of the answer.

Can you test these explanations rather than choosing one at the start?
- status changes are not applied consistently
- company and individual rules are being mixed
- snapshot timing explains the difference

The decision is the agreed population rule, data-quality exceptions and evidence trail. Please give us a model-ready table, data dictionary and an honest baseline.

You should be able to build the evidence from monthly customer and KYC snapshots; monthly account snapshots, status events, limits, product enrolments and signatories. The dataset can test completeness and consistency, not determine whether every document is authentic.

Thanks
