Which relationships look valuable before full profitability exists? - 2025 control review

Team,

Before this becomes another standing report, can we answer the real question?

Finance needs a customer-value proxy for planning, but a full profitability engine and cost allocation are not available. The possible stories are that some low-volume relationships are strategically valuable because of loan or deposit behaviour, that recurring inflows and product depth identify durable value, or that high activity is being offset by service and fee friction.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use August 2025 as the new evidence point rather than recycling the earlier conclusion. The discussion is currently being driven by anecdotes, and the teams involved are describing the same customers differently.

Please prepare a control view with the exceptions, owner and reason each item was included. The output must help us decide how to segment relationships for planning without pretending the proxy is accounting profit.

Data available: monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context; the latest closed loan files available by the request date, including affordability, pricing and origination risk fields; customer contacts, complaints and suggestions; campaign design and customer responses.

Please state the limitation plainly: Label the result as a value proxy. It is not net interest margin, return on equity or customer profitability.

Thanks
