Follow-up: repricing impact by borrower, not only by product

Team,

Before this becomes another standing report, can we answer the real question?

Loan Products needs to identify borrowers most exposed to repricing and the questions customers are likely to raise. The possible stories are that variable-rate customers show higher payment pressure, that thin affordability buffers matter more than loan size, or that clear communication reduces avoidable complaints.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use November 2021 as the new evidence point rather than recycling the earlier conclusion. The timing also overlaps with SARB lifts repo rate 25bp in hiking cycle start. Treat that as context to test, not an answer. Several teams are reporting more failed or retried activity than they expected, but they do not agree on the cause.

Please prepare a Power BI page with drill-through to a reproducible case list. The output must help us decide which customers need proactive communication and which product assumptions need review.

Data available: the latest closed loan files available by the request date, including affordability, pricing and origination risk fields; collections cases, promises to pay and recovery payments; customer contacts, complaints and suggestions; transaction-level timestamps, channels, amounts, statuses and error context.

Please state the limitation plainly: Use recorded loan rates and behaviour; do not infer contractual repricing terms not present in the data.

Thanks
