Follow-up: are distressed customers entering the right pathway?

Hi,

This came up in a working session and nobody had the same definition.

Collections needs to distinguish temporary operational failures, short-term cash-flow stress and sustained affordability problems.

I do not want a dashboard that simply counts the outcome. Start with the competing explanations: some customers recover after payday; repeat failures and complaints indicate deeper stress; or bank-side processing issues are entering collections.

The operating teams agree that more journeys are failing; they disagree on whether the customer, the bank or a downstream party owns the failure. This has returned because the previous answer was useful but not strong enough to become a standing rule. Use December 2022 as the new evidence point rather than recycling the earlier conclusion.

What we need to decide is which treatment path, contact tone and escalation should apply. Please bring a Power BI page with drill-through to a reproducible case list, including a few cases we can trace from source to conclusion.

The available evidence is collections cases, promises to pay and recovery payments; transaction-level timestamps, channels, amounts, statuses and error context; debit-order mandates, collection dates, suspensions and cancellations; customer contacts, complaints and suggestions; the latest closed loan files available by the request date, including affordability, pricing and origination risk fields. The data contains behavioural indicators, not a complete vulnerability or hardship assessment.

Thank you
