Follow-up: which fees create revenue, and which create avoidable exits?

Team,

Before this becomes another standing report, can we answer the real question?

Pricing needs to understand whether fee complaints reflect affordability, unclear value, service failure or a genuinely poor price point. The possible stories are that fee reversals treat symptoms without fixing the journey, that high-use customers tolerate fees when service works, or that complaints cluster after specific charges.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use September 2021 as the new evidence point rather than recycling the earlier conclusion. Failure anecdotes are beginning to drive decisions, although retries and late posting may be making the problem look larger than the affected-customer population.

Please prepare a control view with the exceptions, owner and reason each item was included. The output must help us decide which fee, wording, waiver or product design should be tested.

Data available: monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions.

Please state the limitation plainly: The data supports charges and behaviour, not a complete fee-income or cost-to-serve calculation.

Thanks
