Are distressed customers entering the right pathway?

Hi all,

I may be joining dots that do not belong together, so please challenge the premise.

Collections needs to distinguish temporary operational failures, short-term cash-flow stress and sustained affordability problems. There is no confirmed problem yet; this is a request to test an assumption before it becomes policy.

Could the answer be that repeat failures and complaints indicate deeper stress? Or are we actually seeing that some customers recover after payday? I also do not want us to miss the possibility that bank-side processing issues are entering collections.

The practical decision is which treatment path, contact tone and escalation should apply. Please send a Power BI page with drill-through to a reproducible case list; I need the exceptions and counter-examples, not only an average.

Work from collections cases, promises to pay and recovery payments; transaction-level timestamps, channels, amounts, statuses and error context; debit-order mandates, collection dates, suspensions and cancellations; customer contacts, complaints and suggestions; the latest closed loan files available by the request date, including affordability, pricing and origination risk fields. The data contains behavioural indicators, not a complete vulnerability or hardship assessment.

Regards
