Quick question: next best action starts with next best silence

Morning,

I need help with something that sounds simple but probably is not.

Product wants a recommendation framework that suppresses offers after complaints, failed payments or unsuitable customer events. The operating teams agree that more journeys are failing; they disagree on whether the customer, the bank or a downstream party owns the failure. Different teams have produced different answers from the same period, so population and timing rules need to be visible.

The questions I would ask in the room are:
1. What would we expect to see if recent behaviour identifies a useful product need?
2. What evidence would instead support that campaign eligibility differs from likely conversion?
3. How do we rule out that service recovery should precede selling?

We looked at a version of this before. For the July 2021 review, please show what changed and whether the earlier conclusion still holds. Please work towards the decision rules and evaluation design for a controlled campaign. A useful output would be a Power BI page with drill-through to a reproducible case list.

Use monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions; campaign design and customer responses; the latest closed loan files available by the request date, including affordability, pricing and origination risk fields. One caution: Do not train on campaign outcomes without accounting for who was selected to receive each campaign.

Regards
