Fee outcomes after failed payments

Team,

Before this becomes another standing report, can we answer the real question?

Compliance wants to examine charges that follow failed, reversed or delayed transactions and whether complaints were resolved consistently. The possible stories are that similar cases receive different remedies, that bank-side delay creates avoidable charges, or that fees follow customer-caused failure.

We looked at a version of this before. For the April 2020 review, please show what changed and whether the earlier conclusion still holds. Please start with the decision we need to make, then show whether the available evidence is strong enough to support it.

Please prepare a working Excel file with the exception population and clear columns. The output must help us decide whether a control, remediation population or policy clarification is required.

Data available: transaction-level timestamps, channels, amounts, statuses and error context; monthly account snapshots, status events, limits, product enrolments and signatories; customer contacts, complaints and suggestions; debit-order mandates, collection dates, suspensions and cancellations.

Please state the limitation plainly: The analysis can identify patterns and comparable cases; Compliance must interpret policy and legal obligations.

Thanks
