Follow-up: please find decisions that do not match the recorded evidence

Morning,

I need help with something that sounds simple but probably is not.

Audit is testing whether approvals, declines, restrictions and collections outcomes are consistent with recorded policy inputs. The operating teams agree that more journeys are failing; they disagree on whether the customer, the bank or a downstream party owns the failure. Different teams have produced different answers from the same period, so population and timing rules need to be visible.

The questions I would ask in the room are:
1. What would we expect to see if overrides are rare and explainable?
2. What evidence would instead support that a channel or period has a materially different decision pattern?
3. How do we rule out that missing data looks like an override?

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use November 2022 as the new evidence point rather than recycling the earlier conclusion. Please work towards the sample for process-owner walkthroughs and policy evidence. A useful output would be a control view with the exceptions, owner and reason each item was included.

Use the latest closed loan files available by the request date, including affordability, pricing and origination risk fields; monthly account snapshots, status events, limits, product enrolments and signatories; collections cases, promises to pay and recovery payments; monthly customer and KYC snapshots. One caution: The files do not contain every approval authority or policy version; flag unexplained differences rather than declaring misconduct.

Regards
