KYC refresh should be risk-based, not a blanket campaign

Morning,

I need help with something that sounds simple but probably is not.

A blanket refresh would create unnecessary customer friction, so Compliance wants a defensible prioritisation. The operating teams agree that more journeys are failing; they disagree on whether the customer, the bank or a downstream party owns the failure.

The questions I would ask in the room are:
1. What would we expect to see if higher-risk active accounts should lead?
2. What evidence would instead support that company ownership and cross-border activity create distinct needs?
3. How do we rule out that many document gaps belong to inactive or closed accounts?

We looked at a version of this before. For the May 2020 review, please show what changed and whether the earlier conclusion still holds. Please work towards the refresh sequence, exclusion rules and customer-contact approach. A useful output would be a one-page finding note plus the underlying CSV for our own review.

Use monthly customer and KYC snapshots; monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context. One caution: Completeness fields do not prove document validity or current legal sufficiency.

Regards
