Recovery payments need a proper bridge - 2025 control review

Hi team,

Collections and Finance are using different notions of a successful recovery, especially when payments arrive after the promised date or through another channel.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use July 2025 as the new evidence point rather than recycling the earlier conclusion. The discussion is currently being driven by anecdotes, and the teams involved are describing the same customers differently.

Can you test these explanations rather than choosing one at the start?
- partial cures are being reported as full cures
- late payments are being treated as broken promises
- a payment reaches the account but not the collections case

The decision is the definition of cure and the exception queue that Finance and Collections will both use. Please give us a working Excel file with the exception population and clear columns.

You should be able to build the evidence from collections cases, promises to pay and recovery payments; transaction-level timestamps, channels, amounts, statuses and error context; the latest closed loan files available by the request date, including affordability, pricing and origination risk fields. The data can reconcile customer and case activity, but not the accounting ledger entry.

Thanks
