Which failures are really sitting with a third party? - 2022 control review

Hi team,

Third-Party Risk wants to understand whether external dependencies are repeatedly associated with failed or delayed customer journeys.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use September 2022 as the new evidence point rather than recycling the earlier conclusion. Failure anecdotes are beginning to drive decisions, although retries and late posting may be making the problem look larger than the affected-customer population.

Can you test these explanations rather than choosing one at the start?
- third-party timeouts cluster by channel
- internal latency is being attributed externally
- repeat incidents create disproportionate customer contact

The decision is which supplier relationship requires evidence gathering or a formal service review. Please give us a control view with the exceptions, owner and reason each item was included.

You should be able to build the evidence from transaction-level timestamps, channels, amounts, statuses and error context; ATM attempts, host responses, PIN attempts, blocked-card state and latency; customer contacts, complaints and suggestions. There is no vendor master, contract, SLA or invoice table. Treat external-context fields as indicators, not contractual proof.

Thanks
