Follow-up: why do late postings keep changing yesterday's answer?

Hi team,

Finance and Operations are reconciling the same activity to different days because authorisation, posting and statement dates do not always line up.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use March 2021 as the new evidence point rather than recycling the earlier conclusion. Failure anecdotes are beginning to drive decisions, although retries and late posting may be making the problem look larger than the affected-customer population.

Can you test these explanations rather than choosing one at the start?
- most breaks are timing differences
- retries or reversals are being counted twice
- a specific channel is posting outside the expected cut-off

The decision is whether matching rules, cut-off times or source ownership must change. Please give us a model-ready table, data dictionary and an honest baseline.

You should be able to build the evidence from transaction-level timestamps, channels, amounts, statuses and error context; debit-order mandates, collection dates, suspensions and cancellations; available customer bank statements. Statements are only available for selected accounts and months; use them as evidence samples, not as the population denominator.

Thanks
