Repricing impact by borrower, not only by product

Hi team,

Loan Products needs to identify borrowers most exposed to repricing and the questions customers are likely to raise.

We looked at a version of this before. For the December 2019 review, please show what changed and whether the earlier conclusion still holds. Failure anecdotes are beginning to drive decisions, although retries and late posting may be making the problem look larger than the affected-customer population. The first extracts did not reconcile, which means source precedence and exclusions must be part of the answer.

Can you test these explanations rather than choosing one at the start?
- clear communication reduces avoidable complaints
- thin affordability buffers matter more than loan size
- variable-rate customers show higher payment pressure

The decision is which customers need proactive communication and which product assumptions need review. Please give us a control view with the exceptions, owner and reason each item was included.

You should be able to build the evidence from the latest closed loan files available by the request date, including affordability, pricing and origination risk fields; collections cases, promises to pay and recovery payments; customer contacts, complaints and suggestions; transaction-level timestamps, channels, amounts, statuses and error context. Use recorded loan rates and behaviour; do not infer contractual repricing terms not present in the data.

Thanks
