Did the bank charge customers after its own process failed?

Hi all,

I may be joining dots that do not belong together, so please challenge the premise.

Compliance wants to examine charges that follow failed, reversed or delayed transactions and whether complaints were resolved consistently. There is no confirmed problem yet; this is a request to test an assumption before it becomes policy.

Could the answer be that similar cases receive different remedies? Or are we actually seeing that fees follow customer-caused failure? I also do not want us to miss the possibility that bank-side delay creates avoidable charges.

The practical decision is whether a control, remediation population or policy clarification is required. Please send a model-ready table, data dictionary and an honest baseline; I need the exceptions and counter-examples, not only an average.

Work from transaction-level timestamps, channels, amounts, statuses and error context; monthly account snapshots, status events, limits, product enrolments and signatories; customer contacts, complaints and suggestions; debit-order mandates, collection dates, suspensions and cancellations. The analysis can identify patterns and comparable cases; Compliance must interpret policy and legal obligations.

Regards
