Why do late postings keep changing yesterday's answer?

Morning,

I need help with something that sounds simple but probably is not.

Finance and Operations are reconciling the same activity to different days because authorisation, posting and statement dates do not always line up. Please start with the decision we need to make, then show whether the available evidence is strong enough to support it.

The questions I would ask in the room are:

1. What would we expect to see if a specific channel is posting outside the expected cut-off?
2. What evidence would instead support that most breaks are timing differences?
3. How do we rule out that retries or reversals are being counted twice?

Please work towards whether matching rules, cut-off times or source ownership must change. A useful output would be a one-page finding note plus the underlying CSV for our own review.

Use transaction-level timestamps, channels, amounts, statuses and error context; debit-order mandates, collection dates, suspensions and cancellations. One caution: Statements are only available for selected accounts and months; use them as evidence samples, not as the population denominator.

Regards
