Can one management number be traced back to source?

Team,

Before this becomes another standing report, can we answer the real question?

Management reports are expanding faster than the evidence showing how each number was sourced, transformed and approved. The possible stories are that the number can be reperformed from source, that manual exclusions are changing the answer, or that different teams use the same label for different populations.

Please start with the decision we need to make, then show whether the available evidence is strong enough to support it.

Please prepare a model-ready table, data dictionary and an honest baseline. The output must help us decide which data controls must be formalised before the next assurance review.

Data available: monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context; the latest closed loan files available by the request date, including affordability, pricing and origination risk fields; collections cases, promises to pay and recovery payments; customer contacts, complaints and suggestions.

Please state the limitation plainly: Do not create a full enterprise lineage claim; reperform a defined metric and document every limitation.

Thanks
