Quick question: can the KYC population be reproduced without manual repair?

Hi team,

Regulatory Reporting needs a reproducible population of active, restricted and closed accounts with the relevant customer due-diligence fields.

There is no confirmed problem yet; this is a request to test an assumption before it becomes policy.

Can you test these explanations rather than choosing one at the start?

- company and individual rules are being mixed
- status changes are not applied consistently
- snapshot timing explains the difference

The decision is the agreed population rule, data-quality exceptions and evidence trail. Please give us a short decision pack with no more than five slides and an attached evidence table.

You should be able to build the evidence from monthly customer and KYC snapshots; monthly account snapshots, status events, limits, product enrolments and signatories. The dataset can test completeness and consistency, not determine whether every document is authentic.

Thanks
