Which fields belong in the shared analytical view?

Hi team,

Teams are asking for customer identity, risk, income and contact fields in broad analytical extracts.

There is no confirmed problem yet; this is a request to test an assumption before it becomes policy.

Can you test these explanations rather than choosing one at the start?

- different projects require different retention and access
- most use cases need derived or masked fields
- restricted identifiers are being copied for convenience

The decision is the shared schema, restricted extension and audit trail. Please give us a model-ready table, data dictionary and an honest baseline.

You should be able to build the evidence from monthly customer and KYC snapshots; monthly account snapshots, status events, limits, product enrolments and signatories; customer contacts, complaints and suggestions. Minimise access to identity, contact, protected and investigation fields; usefulness alone is not a lawful purpose.

Thanks
