Which customer records genuinely need KYC attention first?

Hi,

This came up in a working session and nobody had the same definition.

A blanket refresh would create unnecessary customer friction, so Compliance wants a defensible prioritisation.

I do not want a dashboard that simply counts the outcome. Start with the competing explanations: higher-risk active accounts should lead; company ownership and cross-border activity create distinct needs; or many document gaps belong to inactive or closed accounts.

The operating teams agree that more journeys are failing; they disagree on whether the customer, the bank or a downstream party owns the failure. The first extracts did not reconcile, which means source precedence and exclusions must be part of the answer.

What we need to decide is the refresh sequence, exclusion rules and customer-contact approach. Please bring a model-ready table, data dictionary and an honest baseline, including a few cases we can trace from source to conclusion.

The available evidence is monthly customer and KYC snapshots; monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context. Completeness fields do not prove document validity or current legal sufficiency.

Thank you
