Before Legal responds, show exactly what happened to the account

Hi,

This came up in a working session and nobody had the same definition.

Legal needs a chronology for accounts closed or restricted where transactions, debit orders or customer contacts continued around the status change.

I do not want a dashboard that simply counts the outcome. Start with the competing explanations: the main risk is poor communication rather than an incorrect decision; the closure was operationally complete; or downstream activity continued after the status event.

Several teams are reporting more failed or retried activity than they expected, but they do not agree on the cause. There are enough data exceptions to make a polished average dangerous; preserve the unresolved cases.

What we need to decide is whether the matter can be answered, remediated or requires formal legal review. Please bring a short decision pack with no more than five slides and an attached evidence table, including a few cases we can trace from source to conclusion.

The available evidence is monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context; debit-order mandates, collection dates, suspensions and cancellations; customer contacts, complaints and suggestions. The analysis can reconstruct events; it cannot determine legal liability or the undisclosed reason for a risk decision.

Thank you
