Which bank was responsible at each point in the loan?

Hi team,

A loan participation question has exposed confusion about which bank originated, serviced and carried each risk share.

The operating teams agree that more journeys are failing; they disagree on whether the customer, the bank or a downstream party owns the failure.

Can you test these explanations rather than choosing one at the start?

- the records clearly support the operating model
- servicing actions do not align with the stated role
- customer-facing activity is being attributed to the wrong institution

The decision is which cases require document review and which are data-quality corrections. Please give us a Power BI page with drill-through to a reproducible case list.

You should be able to build the evidence from loan participation and servicing records available by the request date; the latest closed loan files available by the request date, including affordability, pricing and origination risk fields; debit-order mandates, collection dates, suspensions and cancellations; collections cases, promises to pay and recovery payments. The dataset records roles and activity but is not the signed legal agreement.

Thanks
