Operational volume is hiding repeat handling

Hi,

This came up in a working session and nobody had the same definition.

Operations wants a proxy for cases repeatedly touched across Payments, Collections, Customer Experience and Finance.

I do not want a dashboard that simply counts the outcome. Start with the competing explanations: a small set of exception types creates most hand-offs; late posting generates downstream work; or unclear ownership keeps cases open.

There is no confirmed problem yet; this is a request to test an assumption before it becomes policy. We looked at a version of this before. For the July 2020 review, please show what changed and whether the earlier conclusion still holds.

What we need to decide is which process should be redesigned and where ownership should sit. Please bring a one-page finding note plus the underlying CSV for our own review, including a few cases we can trace from source to conclusion.

The available evidence is transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions; collections cases, promises to pay and recovery payments; debit-order mandates, collection dates, suspensions and cancellations. There is no work-queue or staff-time table, so report observable hand-offs and repeat events rather than labour hours.

Thank you
