Useful does not mean everyone should see it

Hi team,

Teams are asking for customer identity, risk, income and contact fields in broad analytical extracts.

We looked at a version of this before. For the August 2020 review, please show what changed and whether the earlier conclusion still holds. There is no confirmed problem yet; this is a request to test an assumption before it becomes policy.

Can you test these explanations rather than choosing one at the start?

- different projects require different retention and access
- most use cases need derived or masked fields
- restricted identifiers are being copied for convenience

The decision is the shared schema, restricted extension and audit trail. Please give us a working Excel file with the exception population and clear columns.

You should be able to build the evidence from monthly customer and KYC snapshots; monthly account snapshots, status events, limits, product enrolments and signatories; customer contacts, complaints and suggestions. Minimise access to identity, contact, protected and investigation fields; usefulness alone is not a lawful purpose.

Thanks
