Account opening is not the end of onboarding

Hi team,

Branch Network wants to separate productive onboarding from accounts that never progress beyond opening and initial deposit.

We looked at a version of this before. For the September 2020 review, please show what changed and whether the earlier conclusion still holds. There are enough data exceptions to make a polished average dangerous; preserve the unresolved cases.

Can you test these explanations rather than choosing one at the start?

- card or online activation friction delays use
- some customer types need assisted follow-up
- first useful activity varies by branch

The decision is where branch coaching or onboarding process changes are needed. Please give us a working Excel file with the exception population and clear columns.

You should be able to build the evidence from monthly customer and KYC snapshots; monthly account snapshots, status events, limits, product enrolments and signatories; available initial-deposit records up to the request date; transaction-level timestamps, channels, amounts, statuses and error context; ATM attempts, host responses, PIN attempts, blocked-card state and latency. Do not rank branches on raw volume without controlling for opening month, customer mix and account type.

Thanks
