First-contact resolution from the customer's side

Hi team,

Customer Experience wants to understand which issues return within days and whether the customer changes channel to get an answer.

We looked at a version of this before. For the September 2020 review, please show what changed and whether the earlier conclusion still holds. The first extracts did not reconcile, which means source precedence and exclusions must be part of the answer.

Can you test these explanations rather than choosing one at the start?

- transaction posting changed after the first answer
- channel handover loses context
- the first contact did not resolve the issue

The decision is which journeys need process redesign, clearer wording or ownership. Please give us a control view with the exceptions, owner and reason each item was included.

You should be able to build the evidence from customer contacts, complaints and suggestions; transaction-level timestamps, channels, amounts, statuses and error context; ATM attempts, host responses, PIN attempts, blocked-card state and latency; debit-order mandates, collection dates, suspensions and cancellations. Communication records do not contain every call recording or agent action, so measure observable repeat contact.

Thanks
