Vulnerability signals and customer treatment

Team,

Before this becomes another standing report, can we answer the real question?

Compliance needs an outcome view for customers who may be more exposed to failed payments, repeated fees or difficult service journeys. The possible stories are that channel access affects resolution, that standard contact strategies create repeat complaints, or that income and collections stress identify higher exposure.

We looked at a version of this before. For the September 2020 review, please show what changed and whether the earlier conclusion still holds. There are enough data exceptions to make a polished average dangerous; preserve the unresolved cases.

Please prepare a short decision pack with no more than five slides and an attached evidence table. The output must help us decide which customer-treatment controls and monitoring indicators should be introduced.

Data available: monthly customer and KYC snapshots; transaction-level timestamps, channels, amounts, statuses and error context; collections cases, promises to pay and recovery payments; customer contacts, complaints and suggestions.

Please state the limitation plainly: Use vulnerability indicators carefully and never use them to reduce service or exclude customers.

Thanks
