The closure file needs a defensible chronology

Hi all,

I may be joining dots that do not belong together, so please challenge the premise.

Legal needs a chronology for accounts closed or restricted where transactions, debit orders or customer contacts continued around the status change. Please start with the decision we need to make, then show whether the available evidence is strong enough to support it.

Could the answer be that the main risk is poor communication rather than an incorrect decision? Or are we actually seeing that downstream activity continued after the status event? I also do not want us to miss the possibility that the closure was operationally complete.

We looked at a version of this before. For the November 2020 review, please show what changed and whether the earlier conclusion still holds. The practical decision is whether the matter can be answered, remediated or requires formal legal review. Please send a one-page finding note plus the underlying CSV for our own review; I need the exceptions and counter-examples, not only an average.

Work from monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context; debit-order mandates, collection dates, suspensions and cancellations; customer contacts, complaints and suggestions. The analysis can reconstruct events; it cannot determine legal liability or the undisclosed reason for a risk decision.

Regards
