Missed payment, service failure or genuine hardship?

Team,

Before this becomes another standing report, can we answer the real question?

Collections needs to distinguish temporary operational failures, short-term cash-flow stress and sustained affordability problems. The possible stories are that bank-side processing issues are entering collections, that some customers recover after payday, or that repeat failures and complaints indicate deeper stress.

We looked at a version of this before. For the November 2020 review, please show what changed and whether the earlier conclusion still holds. The discussion is currently being driven by anecdotes, and the teams involved are describing the same customers differently.

Please prepare a model-ready table, data dictionary and an honest baseline. The output must help us decide which treatment path, contact tone and escalation should apply.

Data available: collections cases, promises to pay and recovery payments; transaction-level timestamps, channels, amounts, statuses and error context; debit-order mandates, collection dates, suspensions and cancellations; customer contacts, complaints and suggestions; the latest closed loan files available by the request date, including affordability, pricing and origination risk fields.

Please state the limitation plainly: The data contains behavioural indicators, not a complete vulnerability or hardship assessment.

Thanks
