The avoidable-work question for EXCO

Hi,

This came up in a working session and nobody had the same definition.

Digital use is rising, but repeat calls, branch visits and failed journeys may mean the bank is serving the same need more than once.

I do not want a dashboard that simply counts the outcome. Start with the competing explanations: digital journeys are resolving customer needs; a small set of broken journeys creates most repeat contact; or customers begin digitally and finish through an assisted channel.

Several teams are reporting more failed or retried activity than they expected, but they do not agree on the cause. Different teams have produced different answers from the same period, so population and timing rules need to be visible. We looked at a version of this before. For the April 2021 review, please show what changed and whether the earlier conclusion still holds.

What we need to decide is which journeys should be fixed before another channel-adoption campaign is funded. Please bring a model-ready table, data dictionary and an honest baseline, including a few cases we can trace from source to conclusion.

The available evidence is transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions; ATM attempts, host responses, PIN attempts, blocked-card state and latency; monthly account snapshots, status events, limits, product enrolments and signatories. The dataset can measure repeat contacts and channel sequences, not fully allocated service cost.

Thank you
