Quick question: customer statement, system record and contact notes need one chronology

Hi,

This came up in a working session and nobody had the same definition.

A customer dispute cannot be assessed from the complaint text alone because authorisation, posting, reversal and contact dates differ.

I do not want a dashboard that simply counts the outcome. Start with the competing explanations: the customer saw a temporary posting as final; a bank-side delay caused the loss; or the complaint outcome does not match the underlying evidence.

The operating teams agree that more journeys are failing; they disagree on whether the customer, the bank or a downstream party owns the failure. There are enough data exceptions to make a polished average dangerous; preserve the unresolved cases. This has returned because the previous answer was useful but not strong enough to become a standing rule. Use May 2021 as the new evidence point rather than recycling the earlier conclusion.

What we need to decide is the evidence position and whether remediation should precede correspondence. Please bring a one-page finding note plus the underlying CSV for our own review, including a few cases we can trace from source to conclusion.

The available evidence is transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions; ATM attempts, host responses, PIN attempts, blocked-card state and latency. Use statements only where they exist and do not invent merchant evidence or call recordings.

Thank you
