Price, value or poor explanation?

Hi,

This came up in a working session and nobody had the same definition.

Pricing needs to understand whether fee complaints reflect affordability, unclear value, service failure or a genuinely poor price point.

I do not want a dashboard that simply counts the outcome. Start with the competing explanations: high-use customers tolerate fees when service works; complaints cluster after specific charges; or fee reversals treat symptoms without fixing the journey.

The operating teams agree that more journeys are failing; they disagree on whether the customer, the bank or a downstream party owns the failure. The first extracts did not reconcile, which means source precedence and exclusions must be part of the answer. This has returned because the previous answer was useful but not strong enough to become a standing rule. Use June 2021 as the new evidence point rather than recycling the earlier conclusion.

What we need to decide is which fee, wording, waiver or product design should be tested. Please bring a control view with the exceptions, owner and reason each item was included, including a few cases we can trace from source to conclusion.

The available evidence is monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions. The data supports charges and behaviour, not a complete fee-income or cost-to-serve calculation.

Thank you
