A technically valid fee can still create a poor outcome

Hi all,

I may be joining dots that do not belong together, so please challenge the premise.

Compliance wants to examine charges that follow failed, reversed or delayed transactions and whether complaints were resolved consistently. Several teams are reporting more failed or retried activity than they expected, but they do not agree on the cause. Different teams have produced different answers from the same period, so population and timing rules need to be visible.

Could the answer be that fees follow customer-caused failure? Or are we actually seeing that similar cases receive different remedies? I also do not want us to miss the possibility that bank-side delay creates avoidable charges.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use June 2021 as the new evidence point rather than recycling the earlier conclusion. The practical decision is whether a control, remediation population or policy clarification is required. Please send a one-page finding note plus the underlying CSV for our own review; I need the exceptions and counter-examples, not only an average.

Work from transaction-level timestamps, channels, amounts, statuses and error context; monthly account snapshots, status events, limits, product enrolments and signatories; customer contacts, complaints and suggestions; debit-order mandates, collection dates, suspensions and cancellations. The analysis can identify patterns and comparable cases; Compliance must interpret policy and legal obligations.

Regards
