Find the cases that cross too many teams

Hi all,

I may be joining dots that do not belong together, so please challenge the premise.

Operations wants a proxy for cases repeatedly touched across Payments, Collections, Customer Experience and Finance. The operating teams agree that more journeys are failing; they disagree on whether the customer, the bank or a downstream party owns the failure. Different teams have produced different answers from the same period, so population and timing rules need to be visible.

Could the answer be that late posting generates downstream work? Or are we actually seeing that unclear ownership keeps cases open? I also do not want us to miss the possibility that a small set of exception types creates most hand-offs.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use July 2021 as the new evidence point rather than recycling the earlier conclusion. The practical decision is which process should be redesigned and where ownership should sit. Please send a working Excel file with the exception population and clear columns; I need the exceptions and counter-examples, not only an average.

Work from transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions; collections cases, promises to pay and recovery payments; debit-order mandates, collection dates, suspensions and cancellations. There is no work-queue or staff-time table, so report observable hand-offs and repeat events rather than labour hours.

Regards
