Quick question: please find decisions that do not match the recorded evidence

Hi team,

Audit is testing whether approvals, declines, restrictions and collections outcomes are consistent with recorded policy inputs.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use September 2021 as the new evidence point rather than recycling the earlier conclusion. Several teams are reporting more failed or retried activity than they expected, but they do not agree on the cause.

Can you test these explanations rather than choosing one at the start?

- missing data looks like an override
- a channel or period has a materially different decision pattern
- overrides are rare and explainable

The decision is the sample for process-owner walkthroughs and policy evidence. Please give us a Power BI page with drill-through to a reproducible case list.

You should be able to build the evidence from the latest closed loan files available by the request date, including affordability, pricing and origination risk fields; monthly account snapshots, status events, limits, product enrolments and signatories; collections cases, promises to pay and recovery payments; monthly customer and KYC snapshots. The files do not contain every approval authority or policy version; flag unexplained differences rather than declaring misconduct.

Thanks
