Quick question: repeat contact is exposing broken ownership

Hi team,

Customer Experience wants to understand which issues return within days and whether the customer changes channel to get an answer.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use September 2021 as the new evidence point rather than recycling the earlier conclusion. Several teams are reporting more failed or retried activity than they expected, but they do not agree on the cause.

Can you test these explanations rather than choosing one at the start?

- the first contact did not resolve the issue
- channel handover loses context
- transaction posting changed after the first answer

The decision is which journeys need process redesign, clearer wording or ownership. Please give us a one-page finding note plus the underlying CSV for our own review.

You should be able to build the evidence from customer contacts, complaints and suggestions; transaction-level timestamps, channels, amounts, statuses and error context; ATM attempts, host responses, PIN attempts, blocked-card state and latency; debit-order mandates, collection dates, suspensions and cancellations. Communication records do not contain every call recording or agent action, so measure observable repeat contact.

Thanks
