Document gaps, risk and account activity

Hi,

This came up in a working session and nobody had the same definition.

A blanket refresh would create unnecessary customer friction, so Compliance wants a defensible prioritisation.

I do not want a dashboard that simply counts the outcome. Start with the competing explanations: many document gaps belong to inactive or closed accounts; company ownership and cross-border activity create distinct needs; or higher-risk active accounts should lead.

Failure anecdotes are beginning to drive decisions, although retries and late posting may be making the problem look larger than the affected-customer population. This has returned because the previous answer was useful but not strong enough to become a standing rule. Use January 2022 as the new evidence point rather than recycling the earlier conclusion.

What we need to decide is the refresh sequence, exclusion rules and customer-contact approach. Please bring a working Excel file with the exception population and clear columns, including a few cases we can trace from source to conclusion.

The available evidence is monthly customer and KYC snapshots; monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context. Completeness fields do not prove document validity or current legal sufficiency.

Thank you
