Recovery payments need a proper bridge

Team,

Before this becomes another standing report, can we answer the real question?

Collections and Finance are using different notions of a successful recovery, especially when payments arrive after the promised date or through another channel. The possible stories are that partial cures are being reported as full cures, that a payment reaches the account but not the collections case, or that late payments are being treated as broken promises.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use February 2022 as the new evidence point rather than recycling the earlier conclusion. Several teams are reporting more failed or retried activity than they expected, but they do not agree on the cause. The first extracts did not reconcile, which means source precedence and exclusions must be part of the answer.

Please prepare a short decision pack with no more than five slides and an attached evidence table. The output must help us decide the definition of cure and the exception queue that Finance and Collections will both use.

Data available: collections cases, promises to pay and recovery payments; transaction-level timestamps, channels, amounts, statuses and error context; the latest closed loan files available by the request date, including affordability, pricing and origination risk fields.

Please state the limitation plainly: The data can reconcile customer and case activity, but not the accounting ledger entry.

Thanks
